

Career-transforming software for civil engineers

Civil RA

by Er. Shripad Khaparde · B.E. (Civil), MBA
32+ years in Estimation, Tendering, Planning & Budgeting — India & Oman

Rate Analysis you already know, built into one file.

A rate is more than a formula. It is the result of work methodology, years of practical experience, and actual consumption of labour, materials, and plant.

Civil RA brings these elements together with industry- and project-specific accuracy. Every rate is developed using practical construction knowledge and can be compared against your own project trends and historical data.

Don't build rates from a blank sheet. Build them from experience, data, and proven project performance.

Civil RA — Smarter Rate Analysis. Better Cost Decisions.

Specimen — one item, as the tool computes it	
Item 2.56	RCC M20, footing
Tender BOQ Rate	₹ 9,559.72 / cum
Rate Analysis (RA) Rate	₹ 7,391.24 / cum
Labour	₹ 1,300.00
Material	₹ 5,860.00
Plant (Machinery + Fuel)	₹ 231.24
L + M + P	₹ 7,391.24

What it does

Nine things, in the order a BOQ actually moves through your hands — from upload to submitted quote.

Sr	Feature	What it means at site
1	Import B0Q	Upload any project's Excel B0Q – Sr No, Item, Description, Unit, Qty, Rate. Header row is found automatically, whatever format it was typed in.
2	Import resource rates	Bring in material, labour, machinery and fuel rates from Excel, or enter once and reuse across every item that needs them.
3	Import productivity	Enter site-proven output – 50 cum excavation/day by JCB – or consumption per unit. The tool converts it to resource quantity on its own.
4	Diesel linked to machinery	Enter litres/hour and hours/day once against a machine – fuel quantity is computed automatically from that machine's working days, not entered separately.
5	Match similar items – no rework	Every new B0Q is checked against your own past projects. Repeat items – M20/M25/M30, floor-wise brickwork – surface with a ready RA to copy and adjust, not rebuild.
6	Resource suggestions, from memory	Start typing a concrete or brickwork item and the tool suggests the resources it usually takes – learned from your own past entries, backed by a built-in list for common trades.
7	LMP breakdown	Labour, Material and Plant shown separately for every item, and rolled up for the whole project – ready for management review, per unit and in total.
8	Export & re-import RA	Download the full rate analysis with live Excel formulas, correct productivity or rates offline, re-import – only the items you touched are updated.
9	Project-wise rates, shared history	Each project keeps its own resource rates – location, lead distance and period genuinely differ – while your full rate history stays visible for reference across every project.
10	Export B0Q & resource list	Take the B0Q and the resource rate list out as clean Excel files, for review, procurement planning or handing to a colleague.
11	Select, don't delete	Untick a B0Q item when a revision drops it – its rate analysis stays intact underneath,

ready to switch back on if the item returns.

12 Backup, merge & approval

Several engineers can work the same B0Q in parallel and merge their backups back together – merging only adds new work, and a senior engineer's approved corrections take precedence automatically.

13 Overhead, profit & budget finalisation

Add your overhead % and profit % over the basic rate to get the quoted rate for tender submission – item-wise and rolled up for the whole project.

14 Compare across projects

Check your quoted rate against SSR or an earlier project's quoted rate for the same or a similar item – before you submit, not after.

Your data stays yours

No cloud, no server, no subscription reading your rates. The file runs on your computer; back it up as one file whenever you choose.

Your judgment stays yours

Every suggested match, every carried-forward rate, is a starting point – not an answer. You review, adjust and finalise every figure yourself.

Built for how RA is actually done

By consumption per unit or by productivity – whichever way you were taught, the tool works in your terms, not a fixed template.

Works for a team of one, or a few

Export a backup, hand it to a colleague on another site, merge it back in without losing either person's work.

₹5,000/- · \$55

one-time · per license · sample backup included, merge as your first project

Questions before buying, or need a hand getting started afterward? Support calls and emails are welcome – reach out anytime using the details below.

Received this from a colleague? **Civil RA** is licensed per user, so please get your own copy rather than reusing someone else's file. Forwarding this pamphlet itself is welcome and appreciated.
